

KEYvac R&D inc.

January 2011

The creativity and technical judgement of Charles Khaïrallah, M. engineer and president of Robotics Design are key characteristics that enabled my company to pursue the development and the production protocole of a new High Volume Evacuator handpiece for medico-dental applications: KEY QÜES (Quiet Universal Evacuation System).

His ease of understanding technical hurdles and his capacity to innovate in order to use new approaches to complete a project give a significant competitive advantage to to Robotics Design.

*Dr Patrick D. Lemoine*
