

LES NETTOYEURS PROFESSIONNELS DE CONDUITS D'AIR QC

Témoignage de monsieur Roger Legault, président d'Airtox

Testimonial of Mr. Roger Légault, president of Airtox

From a technological view-point, ANATROLLER™ is the most advanced robot on the market. We own a robot from another manufacturer which we have not used since we bought the ANATROLLER™. "The robot does what I want it to do. It works in the most difficult situations." At AIRTOX, we use ANATROLLER™ for inspection and cleaning. The ANATROLLER™'s unique characteristic is its articulated arm. It makes a huge difference. We can attach work tools to it such as brushes and air injectors, and can adjust them while the robot is working in the duct. Unlike other robots on the market, you don't need to remove the robot from the duct to adjust attachments. ANATROLLER™ is light, easy to operate, easy to transport, and can easily surmount obstacles. It easily climbs up and down slopes. It can also be used in institutional, commercial and industrial sectors. The services provided by our provider is excellent, they are always available to help us.

Acquiring the ANATROLLER™ has allowed us to reduce our operating costs, and our satisfaction can be rated at 9.5/10. We will not hesitate to work again with the "Cyclone Ventilation" and "Robotics Design" team, which we have already recommended to other enterprises.

We wish you well
