Testimonial of Mr. Guy Grimard, Director of operations for the Danco Télévac Group

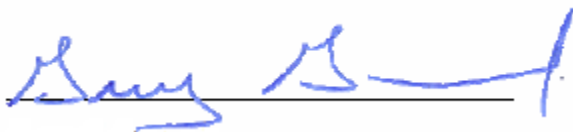

We own a total of six robots including an ANATROLLER™, made by Robotics Design, which we bought two years ago. Its unique brushing technology makes the robot perform very well for cleaning small to medium sized ducts.

It is a very compact and robust robot. The ANATROLLER™ is very easy to manoeuvre. It is connected by a single unique cable that combines control and air which allows the user to save time every time the robot is used.

Because the arm of the ANATROLLER™ can be move in all directions, we are able to clean every surface of the duct in one operation.

We use the ANATROLLER™ robot in many sectors including; medical, institutional, industrial and commercial. The robot is very efficient, and we are very satisfied. Given the opportunity, we will not hesitate to recommend the ANATROLLER™ to other enterprises.
