Témoignage ETS

Testimonial of the "École de technologie supérieure"

We needed a robot for building inspection, a robot specifically designed for our needs. This is why we did not want to buy an "off the shelf" product. Therefore, we searched for a Québécois manufacturer who could adapt his robot to our needs. We thus established a partnership with Robotics Design, founded by a graduate of ETS.

The ANATROLLER™ robot of Robotics Design is stable, robust and flexible; it is capable of going in hard-to-reach places. If it flips over, it always repositions itself in the right position.

I am 100% satisfied with the performance of the ANATROLLER™ which has a very good quality to price ratio.

It was also very enjoyable to work with Mr. Charles Khaïrallah who was always available for us, and respected our schedule.
